PRODUCT SPOTLIGHT

WHAT IS KAVA?

Nature's chill ritual — zero proof, high vibration.

1 The Plant

Kava (*Piper methysticum*) is the root of a pepper-family plant native to Fiji, Vanuatu, Tonga, and Hawai'i. For centuries, islanders have pounded the root into a drink and passed it around a shared bowl to celebrate and unwind together.

2 How It Works

Kava's active compounds, **kavalactones**, tap the same calm-down (GABA) pathways in your brain as a deep breath — without the hangover, empty calories, or blurry judgment that come with alcohol.

3 The Effects

- Calm, relaxed body
- Social, easy talk
- Warm, mild euphoria
- Tingly lips & tongue
- No hangover, no crash

4 First Time?

Heard you need to "load up" your first time? Not quite. Kava has **reverse tolerance** — the kavalactones build up in your body over several visits, so first-timers often feel little at first. Sip 1–2 servings spaced 15–20 min apart, stay patient, and don't chase it with extra rounds. Most regulars say it really clicks by visit two or three.

5 At The Bar

Ask your bartender about tonight's **kava selection** — served the traditional way or mixed into a house tonic. Effects build gradually and peak around **20–30 minutes** in.

21+ **Must be 21+ to consume.** Not recommended if pregnant or nursing. Consult your doctor before use if you take medication — especially sedatives, anti-anxiety meds, or anything metabolized by the liver. Do not combine with alcohol or other depressants.
